Index

A
acrylic as cover material for greenhouses, 68
alcohol, 58
animal waste products, 48

B
bacterial moulds, 42
bare-root nursery, 22, 58
bark, 34, 38, 40, 42
biological control, 56, 63
bleach, 57–58, 60, 61
bulk density, 31, 34

C
C:N ratio, 39–40
Calliandra calothyrsus, 63
Casuarina junghuhniana, 33
cation exchange capacity (CEC), 33–34, 36
charcoal, 38
chlorine, 57–58, 60, 61
cleanliness in the nursery, 62
client feedback, 16
coconut husks, 39, 42
coefficient of variation (CV), 18–19
coffee shells, 39
compost, 39–41, 42, 48
container nursery, 22
containers, 22–29
copper coating of containers, 28
cover materials for greenhouses, 68
culling, 18, 19

damping-off, 56
day length, 71
direct sowing, 13
drip irrigation, 70

electricity, 73
Erythrina spp., 63
experiments record, 74, 76

F
fertility, 33
fertilizer schedules, 50
fertilizers, 42, 45–54
fertilizers, controlled-release, 51–53
fertilizers, granular, 49–51
fertilizers, inorganic, 49–53
fertilizers, organic, 47–49
fumigation, 58
fungicides, 61

G
gas exchange, 31, 42, 72–73
genetic base, 10
genetic quality, 9
germination trays, 13
glass, 68
Gliricidia sepium, 63
grain, 66

H
hardening-off, 7, 16, 62
hydrogen peroxide, 58

I
Inga edulis, 33
inoculation, 13
integrated pest management, 56
irrigation, 69–70
ISTA (International Seed Testing Association), 11
J
jiffy pellets, 24
jiffy pots, 24

L
labelling of seed and nursery beds, 11
Leucaena diversifolia, 76–77
Leucaena leucocephala, 63, 76–77
Leucaena trichandra, 76–77
light quality, 71

M
macronutrients, 45–46
manure, 40, 48
manure, nutrient content, 49
material flow chart, 66
methyl bromide, 59
micronutrients, 45, 47
mist propagation, 69
mycorrhiza, 13

N
nursery bed density, 9
nursery calendar, 74–75, 77
nursery facilities, 65–73
nursery hygiene, 55–64
nursery inventory, 74, 76
nursery layout, 66
nursery management, 74–78

O
osmocote controlled–release fertilizer, 51–53
overgrown plants, 16

P
peat, 34, 37–38
perlite, 34, 37
pest occurrence thresholds, 63
pesticides, 56, 63
pests, 69
pH, 33
Phytophthora spp., 56, 60
plant density, 9, 62
plant development register, 74–75
plant health status, 62
polybags, 23–25
polyester, 68
polyethylene, 67–68
polypropagator, 66–67
polysleeves, 23–25
polystyrene, 37
polytunnel, 66–67
polyvinyl chloride (PVC), 68
porosity, 31–32, 42
pricking out, 13
propagation facilities, 57
Prosopis chilensis, 33
Pythium spp., 56, 60

R
Rhizobium spp., 13
Rhizoctonia spp., 56
rice hulls, 39, 42
root deformities, 15
root system, 7, 14, 30
root trainers, 24–28, 66

S
sand, 34, 36, 42
sawdust, 39, 40, 42
seed collection, 10
seed maturity, 10–11
seed ordering, 10
seed origin, 10
seed pre-treatment, 11, 12
seed processing, 11
seed procurement, 9–11
seed storage, 11, 12
seed storage, orthodox seed, 12
seed storage, recalcitrant seed, 12
seed supplier, 9, 10
seed viability, 11
seedling development, 12–17
seedling quality, 7–21
seedling variability, 17
shade, 70
shade cloth, 70–72
shoot:root ratio, 8
soil as entry point for pests, 58
soil as potting substrate, 34
soil fertility thresholds, 49
soil pasteurization, 59
soil sterilization, 58
soil-less substrates, 35–39, 45, 50
solarization, 59
staff training, 62, 77
steam pasteurization, 59
sterilization of equipment, 57
sturdiness quotient, 8
substrates, 30–44
substrates as entry point for pests, 58–59
substrates, chemical properties, 30, 33
substrates, physical properties, 30–32
substrates, plasticity, 31
substrates, porosity, 31–32
sugar cane bagasse, 39
surface sterilization, 61

T
target seedlings, 7
_Tecoma stans_, 33
temperature, 72
tuff, 37

V
vermiculite, 34, 36, 42

W
water holding capacity, 31–32
water quality, 70
