

1. ZIZIPHUS MAURITIANA

Farmers preferences

A study on by Leenders (2006) on Farmers' perceptions of the role of scattered vegetation in wind erosion control on arable land in BukinaFaso indicate that farmers prefer *Faidherbia albida*, *Balanites aegyptiaca*, *Hyphaene thebaica*, *Scleracarya birrea* and *Ziziphus mauritiana* on their fields.

Extent of Adoption

Leenders (2006) indicates that *Z. mauritiana* is one of the three most common tree and shrub species in the farmers' fields as mentioned by farmers (Table 1)

Table 1: The five most common woody species present in the fields of the 60 farmers interviewed

Species	Percentage
<i>Balanites aegyptiaca</i>	13.1
<i>Acacia raddiana</i>	14.0
<i>Zizphus mauritiana</i>	10.3
<i>Faidherbia albida</i>	9.6
<i>Scerocarya birrea</i>	8.0
Others	45.0
